Lecture 4: Perceptron

Dr. Mehrdad Maleki

Boolean Functions

Boolean variable, $X = 0$ or $X = 1$.

Boolean Functions

Boolean variable, $X = 0$ or $X = 1$.

1. AND: $X \wedge Y = 1 \Leftrightarrow X = Y = 1$

Boolean Functions

Boolean variable, $X = 0$ or $X = 1$.

1. AND: $X \wedge Y = 1 \Leftrightarrow X = Y = 1$
2. OR: $X \vee Y = 1 \Leftrightarrow X = 1$ or $Y = 1$

Boolean Functions

Boolean variable, $X = 0$ or $X = 1$.

1. AND: $X \wedge Y = 1 \Leftrightarrow X = Y = 1$
2. OR: $X \vee Y = 1 \Leftrightarrow X = 1$ or $Y = 1$
3. NEGATION:

$$\overline{X} = 1 \Leftrightarrow X = 0$$

$$\overline{X} = 0 \Leftrightarrow X = 1$$

Boolean Functions

Boolean variable, $X = 0$ or $X = 1$.

1. AND: $X \wedge Y = 1 \Leftrightarrow X = Y = 1$

2. OR: $X \vee Y = 1 \Leftrightarrow X = 1 \text{ or } Y = 1$

3. NEGATION:

$$\overline{X} = 1 \Leftrightarrow X = 0$$

$$\overline{X} = 0 \Leftrightarrow X = 1$$

4. XOR: $X \oplus Y = (\overline{X} \wedge Y) \vee (X \wedge \overline{Y})$

Some useful properties

► $\overline{X \wedge Y} = \overline{X} \vee \overline{Y}$

Some useful properties

► $\overline{X \wedge Y} = \overline{X} \vee \overline{Y}$

► $\overline{X \vee Y} = \overline{X} \wedge \overline{Y}$

Some useful properties

► $\overline{X \wedge Y} = \overline{X} \vee \overline{Y}$

► $\overline{X \vee Y} = \overline{X} \wedge \overline{Y}$

► $\overline{\overline{X}} = X$

$$X \wedge Y = \begin{cases} 1 & \text{if } w_1 * X + w_2 * Y \geq b \\ 0 & \text{else} \end{cases}$$

$$1 \wedge 1 = 1 \Rightarrow w_1 + w_2 \geq b$$

$$1 \wedge 0 = 0 \Rightarrow w_1 < b$$

$$0 \wedge 1 = 0 \Rightarrow w_2 < b$$

$$0 \wedge 0 = 0 \Rightarrow 0 < b$$

find integers w_1, w_2, b that satisfies all of these constraints.

$$X \wedge Y = \begin{cases} 1 & \text{if } X + Y \geq 2 \\ 0 & \text{else} \end{cases}$$

$$X \vee Y = \begin{cases} 1 & \text{if } w_1 X + w_2 Y \geq b \\ 0 & \text{else} \end{cases}$$

$$X \vee Y = \begin{cases} 1 & \text{if } X + Y \geq 1 \\ 0 & \text{else} \end{cases}$$

$$\bar{X} = \begin{cases} 1 & \text{if } wX \geq b \\ 0 & \text{else} \end{cases}$$

$$\bar{X} = \begin{cases} 1 & \text{if } -X \geq 0 \\ 0 & \text{else} \end{cases}$$

Majority Gate

$$y = \begin{cases} 1 & \text{if } \sum_{i=1}^n x_i \geq 3 \\ 0 & \text{else} \end{cases}$$

Universal AND Gate

$$y = \begin{cases} 1 & \text{if } \sum_{i=1}^k x_i - \sum_{i=k+1}^n x_i \geq k \\ 0 & \text{else} \end{cases}$$

$$X \oplus Y = \begin{cases} 1 & \text{if } w_1 X + w_2 Y \geq b \\ 0 & \text{else} \end{cases}$$

$$1 \oplus 0 = 1 \Rightarrow w_1 \geq b$$

$$0 \oplus 1 = 1 \Rightarrow w_2 \geq b$$

$$1 \oplus 1 = 0 \Rightarrow w_1 + w_2 < b$$

$$0 \oplus 0 = 0 \Rightarrow 0 < b$$

Find integers w_1, w_2, b that satisfies all of these constraints.

Perceptron

- ▶ Input (x_1, \dots, x_N)
- ▶ Weights (w_1, \dots, w_N)
- ▶ If $w_1x_1 + \dots + w_Nx_N \geq b$ then output=1
- ▶ Else, i.e., $w_1x_1 + \dots + w_Nx_N < b$, output=0

$$y = \begin{cases} 1 & \text{if } w_1x_1 + \cdots + w_Nx_N \geq b \\ 0 & \text{else} \end{cases}$$

Let,

$$\phi(z) = \begin{cases} 1 & \text{if } z \geq 0 \\ 0 & \text{else} \end{cases}$$

then,

$$y = \phi(w_1x_1 + \cdots + w_Nx_N - b)$$

ϕ is called the **activation function**.

Activation Functions

- ▶ Identity: $\phi(z) = z$
- ▶ Rectified linear unit (ReLU): $\phi(z) = \max\{0, z\}$
- ▶ Sigmoid: $\phi(z) = \frac{1}{1+e^{-z}}$
- ▶ Hyperbolic tangent: $\phi(z) = \frac{e^z - e^{-z}}{e^z + e^{-z}}$
- ▶ Binary step: $\phi(z) = \begin{cases} 1 & \text{if } z \geq 0 \\ 0 & \text{else} \end{cases}$

Thank You
